

Cattaraugus County Sheriff's Department Launches Pilot Dash-Cam Program

catcountycorruption.com/cattaraugus-county-body-cam-policy-orders-finally-acquired/

The interesting aspect of this is the fact that there appear to be no car cams where the majority of violations occur, so the probable cause aspect of an alleged crime is never documented, the most important part of the 'crime'.

There is too much money to be lost if they were ever required to actually film the probable cause event, especially for DWI stops, which the majority of the time is a victim-less crime. There is a whole economy built around DWI convictions. From the lawyers to parole, to the treatment process, it's all about money.

Axon Vehicle Mounts for Body Cameras

The Axon body cam systems have multi-functional mounting applications. The county could easily afford a vehicle mount and an additional camera for each car, but they don't. On top of that the City of Olean and Salamanca refuse to purchase and deploy any type of video documentation system which is a good indicator of how corrupt they are. The Olean Police Department was provided video cameras for free a couple years back, however they quit using them because they revealed too much misconduct.

Program discovered on June 26, 2018 when CCSO Deputy attempts to sneak up on local Constitutional Rights Activists. Discovered 16 days after CatCountyCorruption.com article published on CCSO Body Cam Policy. How about Olean?

CatCountyCorruption.com

A little over [two weeks after we published the FOIL request](#) results in which we finally acquired the Cattaraugus County Sheriff's Body Cam Policy/Orders, we have discovered that the **Sheriff's Office** is running a dash cam pilot program...

The county had purchased Axon body cameras (Axon is now partnering with commie China) for use on all patrols to be worn by deputies, but not for utilization as dash cams. The body cam systems work perfectly except when they are confiscating firearms from victims of the corrupt local deep state via **Operation Redcoat**.

This was easily seen in one recent 2nd Amendment confiscation operation where four Cattaraugus County deputies showed up, all with body cams, **in which a local citizen's arms were taken from him with no law that allowed them to do so. Make no mistake about it Ladies and Gentleman, they are coming after your ability to defend yourself in this county, to disarm you, and this was a test case... Why didn't you hear this in the local MSM news?**

A FOIL request was filed on the confiscation matter and the FOIL results showed that only one 'officer' had video taped the event. The other three did not. Not only was this a clear violation of our 2nd Amendment Rights of We the People, it was also a [clear violation of the body cam order/policy](#). Were they held accountable, or did they all record the event and the Sheriff's department has refused to release them? More on this issue in another article. Back to the original purpose of this article....

How are they proceeding with this pilot program? Will they rig it to make it appear that it is not cost effective?

One of the standard practices to rig a program like this so the stats show it is not cost effective is to place the pilot program dash cams with deputies who actually follow the rules/law, not the ones that don't. When you have good law enforcement, the complaints are minimal and the stats won't show any tangible results. Its the bad apples that need too be a part of a program like this, to document their conduct. That is where you will see the results. But alas.... this is Cattaraugus County, where the rule of law is on permanent vacation....where justice does not go to die... its dead on arrival.... Body and Dash cams can do wonders for building community trust...

[As quoted by policeone.com](#): "For those departments who use dash cams every day, courts often request this footage as evidence. **In addition, if the community is aware of the use of dash cams within their police department, it can help citizens better understand police situations. This also creates trust between the community and their local police department,** as citizens often believe that if their police officers are being filmed, they will not hide anything."

We didn't see anything in the local papers? Did you? If you or your lawyer are unaware of a dash cam being in use, how will you know to subpoena the evidence?

For good cops it [will protect them](#), for bad one it will provide [evidence to remove them](#).

Ironically it appears that the county took our advice and are using the exact dash cam mounting system that was shown in the [article originally published on June 10, 2018](#). One more article, one more blow to the corrupt local deep state.

Further will you ever see the city of Olean implement a program to keep lying Ryan Aylor honest?
